## Professional Bakery Pan & Oven Rack Cleaning 'Exchange' Program!

Got dirty grimy bakery pans? How about dirty oven racks that are almost solid black? Are you just days away from getting a health code violation? If any of the answers are 'yes', then you need solid solutions from Tomark Bakery Service.

With our bakery pan cleaning & reglazing process, we offer cost-effective cleaning and reglazing (resurfacing) services for all of your bakeware including baking trays, bread pans, perforated sheets such as bagel screens and baguettes or any other type of bakeware in your store's inventory!

We also offer year-round cleaning, decarbonization and repair of bakery oven racks with wheel and rung replacement. Our exclusive process cleans and carbonizes your oven racks to make them like-new. **NO OTHER** process out there can give you a cleaner rack that stays cleaner, longer.

If you're trying to clean your bakery equipment by hand or with a power washer and harsh chemicals, stop wasting your valuable money and time. With oven racks, this method only partially cleans the rack, leaving many unsanitary carbon deposits all over the rack's surface. With bakery pans, power washing only partially cleans the pan while stripping and destroying the pan's protective glaze, without replacing it. You bought the pan glazed, why not keep it that way?

Our state-of-the-art process goes much further than any other type of cleaning. After an intense thermal bath to clean, decarbonize and prepare the bakeware, an FDA approved food grade silicone coating (Glaze) is applied to the prepared pan's surface. Reglazing makes your pans like-new while helping to 'release' your baked product from the pans without the use of costly parchment paper. Glaze also helps keep your pans cleaner, longer.

If you're interested in our unique bakery pan and oven rack cleaning 'exchange' program where satisfaction is always guaranteed, please feel free to contact us for more details and references.
